Education

Degree_Name: Bachelor of Engineering in Computer Engineering

University_Name: Pibulsongkram Rajabhat University

Graduation_Date: Within 2026

Professional Summary

An aspiring Offensive Security Researcher and Computer Engineering student with a strong focus on Low-level programming, Evasion Techniques, Windows Internal and Offensive Security. Experienced in CTF activity.

Core Competencies / Technical Skills

- **Programming/Scripting:** C/C++, x64 Assembly, Python
- **Security Focus:** Malware Development, Windows API, PE Header Analysis, EDR Evasion
- **Tools/OS:** Kali Linux, VMware Workstation Pro, Windows OS, Process Hacker, WinDbg
- **Other:** Git, Markdown/Obsidian,
- **In-depth Knowledge/Research Resources:** ntdoc.m417z.com, vergiliusproject.com

Certificate

- CTF PSRU Cyber Hackathon [2026] #3
- Fortinet Cybersecurity Awareness 2025
- User Experience and User Interface Design – The Association of Thai Software Industry
- Development of IoT with ESP32/ESP8266 and Node-RED for MQTT transformation

Highlighted Projects

- **Advanced Evasion Loader PoC**
 - Indirect Syscalls (C, C++/ASM)Dynamic SSN Resolution, PEB walking, Inline ASM Stub, Export Directory Parsing, Syscall Instruction Search
 - Module Stomping (C, C++)
 - Legitimate Module Loading, PE Header Parsing, Entry Point Redirection
 - Stack Spoofing (C, C++/ASM)
 - Synthetic Stack Frame Creation, Return Address Manipulation, Context Switching (ASM)
- **Security Research Portfolio (Web):**
 - Customized and Deployed a web-based research landing page to systematically showcase offensive security findings and PoC demonstrations
 - Content Architecture: Structured technical documentation for complex evasion techniques including Indirect Syscalls, Module Stomping, and Stack Spoofing
 - Automated Workflow: Utilized Parcel for asset bundling and GitHub Pages for continuous deployment of the research environment
